

Criteria for Snow Disposal Site Evaluation							
LOCATION	ACCESS	NOISE	VISUAL	DRAINAGE	SUB-SURFACE DRAINAGE	CAPACITY	DISTANCE
RJT Complex	Good - from primary Collector Road	Operations are currently restricted to before 4:00 pm	Adjacent to residential but with berm and trees as physical buffer	Good - impermeable surface; drainage to catch basin and dry pond on site	impermeable pavement and Oil/grit separator installed	Good - Adequate	No issue
Bogartown Curve	Fair - No way to turn around	No issue	Limited views from Mullock Drive	Sensitive ditches run into watercourse of Bogart Creek and pond	Impermeable road pavement that lead directly to rural ditches at side of road and into Bogart Creek	Limited - Only road right of way	No issue
	Poor - through residential neighbourhood or recreational parkway - No turn around	Operations would need to be time restricted	Adjacent to residential area with no physical buffer	Moderate - drainage goes to field swales and then to Holland River	impermeable parking lot that drains to swale	Limited - Would greatly affect spring operations of fields.	No issue
Bayview Parkway - Deadend							
Region Land at Snap on Tools	Fair - No turn around	No issue	Can be seen from Hwy 404	Drains to SWMP then to creek	Impermeable pavement/no other treatment	Very Limited - Regional staff parking currently in use	No issue
Regional Land on Harry Walker Pkwy	No current access to land or internal road	No issue	Can be seen from Hwy 404	Poor - permeable land - could drain to adjacent land	Permeable land with no current treatment	Good - Adequate	No issue
Bales Dr. East	No current access to land or internal road	No issue	No issue	Poor - permeable land - could drain to adjacent lands	Permeable land with no current treatment	Good - Adequate	(East Gwillimbury) distance increasing time and cost
