

## **Bradford Bypass**

I just want to start the email off by saying I don't oppose highways. I think the Bradford bypass can be built just not over the Holland river and the green belt. The river and green belt are extremely sensitive. I fear lake Simcoe will suffer long term from this highway along with the green belt. Maybe we can look at alternative routes? I know the Ford government prefers this route for its developers but lake Simcoe and the green belt are too precious to sacrifice for profits. I know the Ford government says they will make the highway environmentally friendly but they have bypassed the EA to fast track the highway which is very concerning. I think getting a full EA is essential. Also no matter how hard they try salt run offs and exhausts can't be stopped and the land they pave over will be lost forever.

Thank you for your time
