

To Council:

The Bradford Bypass development will damage the Holland Marsh, Lake Simcoe, a significant heritage site and countless habitats. The bridge would span the marsh at an elevation akin to the Gardiner Expressway, running from high ground in the east to high ground in the west. It will create air and noise pollution, the salt and sand runoff will damage the marsh.

The climate crisis is here. This would damage wetland carbon sinks, needed to absorb carbon in the atmosphere. It would encourage more development, further fueling the crisis.

Please side with Science.
