

Petition to request a Town of Newmarket traffic study and provide traffic calming (or other measures) for Carol Ave. and Avenue Rd. between Park Ave and Eagle St.

- 1- Crossing Carol Ave. eastbound from Avenue Rd. is needed to reach the mailbox and the sidewalk that leads to schools and to parks.
- 2- cars turning right from Park Ave southbound on Carol Ave. have a limited line of sight and only 200 meters to reach a pedestrian crossing at the Avenue Rd intersection
- 3- accelerating vehicles traveling southbound, after the stop sign seem to be distracted and unable to notice a pedestrian in such short distance from Park Ave to Avenue Rd.
- 4 -Cars have been observed speeding southbound to catch the green light at Eagle to the point where they will pass a slower moving car to do so
- 5 - the painted lines on Carol St were tried a few years ago but do not have any effect
- 6- the recently installed "urban shoulders" have not made a significant change to traffic speed.

I support the request for a formal traffic study that will provide recommendations to the abovementioned issues.
